• General notes:
  Water hazard class 2 (Self-assessment): hazardous for water

(Contd. on page 6)
49.3.6 Do not allow product to reach ground water, water course or sewage system. Rinse off of bigger amounts into drains or the aquatic environment may lead to decreased pH-values. A low pH-value harms aquatic organisms. In the dilution of the use-level the pH-value is considerably increased, so that after the use of the product the aqueous waste, emptied into drains, is only low water-dangerous.

**• Additional ecological information:**
Water hazard class 2 (Self-assessment): hazardous for water
Do not allow product to reach ground water, water course or sewage system.

**• Results of PBT and vPvB assessment** Not applicable.
- PBT: Not applicable.
- vPvB: Not applicable.

**• Other adverse effects**
- General notes:
  - Water hazard class 2 (Self-assessment): hazardous for water
  - Do not allow product to reach ground water, water course or sewage system.

### 13 Disposal considerations

**• Waste treatment methods**
- Recommendation:
  Disposal must comply with the relevant local regulations. We recommend that you contact either the authorities in charge or approved waste disposal companies which will advise you on how to dispose the special waste.

**• Uncleaned packagings:**
- Recommendation:
  Empty contaminated packagings thoroughly. They can be recycled after thorough and proper cleaning.
  Packagings that cannot be cleansed are to be disposed of in the same manner as the product.
- Recommended cleansing agent: Water, if necessary with cleansing agents.
