1 Overview

1.1 How to use this component operating manual

The IQ SENSOR NET operating manual has a modular structure like the IQ SENSOR NET system itself. It consists of a system operating manual and the operating manuals of all the components used.

Please file these component operating manuals into the ring binder of the system operating manual.
1.2 Features of the MIQ/PS

**General characteristics**

The MIQ/PS wide-range power supply supplies the IQ SENSOR NET with its operational voltage. The operational voltage is forwarded to the consumers in the following ways:

- In the case of stacked mounting, via the IQ SENSOR NET contacts on the front and rear of the module
- In the case of distributed mounting, via the IQ SENSOR NET SNCIQ cable
- In the case of sensors, via the SACIQ sensor connecting cable.

With the standard MIQ module housing, the MIQ/PS has the same characteristics as all MIQ modules regarding stability, leakproofness and weather resistance. It also provides the same wide variety of installation options (stacked mounting, canopy mounting, tophat rail mounting, etc.).

The number of MIQ/PS that are required depends on the number of consumers in the system and their power requirement as well as on the overall loss of power in the IQ SENSOR NET cables. Instructions for determining the correct number of power modules are given in the INSTALLATION chapter of the system operating manual.

**Terminal strip**

The MIQ/PS has the following electrical connections on the terminal strip inside the housing:

- 1 x mains connection, two-pole
- 3 x SENSORNET connection.
2 Safety instructions

This component operating manual contains special instructions that must be followed during the installation of the MIQ/PS power supply module. Thus, it is essential to read this component operating manual before carrying out any work with the system. In addition to this manual, the SAFETY chapter of the IQ SENSOR NET system operating manual must be followed.

Always keep this component operating manual together with the system operating manual and all other component operating manuals in the vicinity of the IQ SENSOR NET system.

Special user qualifications

The MIQ/PS may only be connected to the power supply by a trained electrician.

General safety instructions

Safety instructions in this operating manual are identified by the warning symbol (triangle) in the left column. The signal word (e.g. "Caution") indicates the level of danger:

**Warning**
indicates instructions that must be followed precisely in order to prevent serious dangers to persons.

**Caution**
indicates instructions that must be followed precisely in order to avoid slight injuries or damage to the instrument or the environment.

Other labels

**Note**
indicates notes that draw your attention to special features.

**Note**
indicates cross-references to other documents, e.g. operating manuals.
2.1 Authorized use

The authorized use of the MIQ/PS consists of its use as a power supply module in the IQ SENSOR NET.

The technical specifications given in chapter 5 TECHNICAL DATA must be observed. Only operation according to the instructions in this component operating manual is authorized.

Any other use is considered to be unauthorized. Unauthorized use invalidates any claims with regard to the guarantee.

2.2 General safety instructions

The MIQ/PS is constructed and inspected in accordance with the relevant guidelines and norms for electronic instruments (see chapter 5 TECHNICAL DATA).

It left the factory in a safe and secure technical condition.

Function and operational safety

The failure-free function and operational safety of the MIQ/PS is only guaranteed if the generally applicable safety measures and the special safety instructions in this operating manual are followed during its use.

The failure-free function and operational safety of the MIQ/PS is only guaranteed under the environmental conditions that are specified in chapter 5 TECHNICAL DATA.

Safe operation

If safe operation is no longer possible, the MIQ/PS must be taken out of operation and secured against inadvertent operation.

Safe operation is no longer possible if the MIQ/PS:

- has been damaged during transport
- has been stored under adverse conditions for a lengthy period of time
- is visibly damaged
- no longer operates as described in this manual.

If you are in any doubt, contact the supplier of your MIQ/PS.
3 Installation

3.1 Scope of delivery

The scope of delivery of the MIQ/PS is listed in the INSTALLATION chapter of the system operating manual.

3.2 Installation in the IQ SENSOR NET

The IQ SENSOR NET provides a number of options for integrating the MIQ/PS mechanically and electrically in the system (stacked mounting, distributed mounting, etc.). The individual types of installation are described in detail in the INSTALLATION chapter of the system operating manual.

**Note**

To achieve optimum heat transfer, it is recommended to always place the power supply module at the back of a module stack.

**Note**

If there are several power supply modules in the IQ SENSOR NET, it is helpful if all the power supply modules are connected to a single power supply. As a result, the system can be easily switched on and off from a single location.
3.3 Electrical connections: General instructions

**Cable glands**

All electric cables are fed from below via prepared openings in the enclosure of the MIQ/PS. Cable glands with different clamping ranges are included with the MIQ/PS to provide sealing between the cable and enclosure as well as for strain relief. Select the matching cable gland for the respective cable diameter:

- **Small**, clamping range 4.5 to 10 mm. This cable gland is suitable for all IQ SENSOR NET sensor cables.

  ![Small cable gland diagram]

- **Large**, clamping range 7 to 13 mm. This cable gland is required for cable sheaths with an outside diameter of more than 10 mm and is screwed into the enclosure via an extension piece.

  ![Large cable gland diagram]

**Note**

If necessary, you can order more large cable glands in a set of 4 pieces (Model EW/1, Order No. 480 051).
General installation instructions

Observe the following points when attaching connecting wires to the terminal strip:

- Shorten all wires to be used to the length required for the installation.
- Always fit all the ends of the wires with wire end sleeves before connecting them to the terminal strip.
- Any wires that are not used and project into the enclosure must be cut off as closely as possible to the cable gland.
- Screw a small cable gland with sealing ring into each remaining free opening and close it with a blind plug.

Warning

No free wires must be allowed to project into the enclosure. Otherwise, there is a danger that areas safe to contact could come into contact with dangerous voltages which could result in life threatening electric shock when working with the IQ SENSOR NET. Always cut off any wires that are not in use as closely as possible to the cable gland.
3.4 Connecting the power supply

Warning
If the power supply is connected incorrectly, it may represent a danger to life from electric shock. Pay attention to the following points during installation:

- The MIQ/PS may only be connected to the power supply by a trained electrician.
- The connection of the MIQ/PS to the power supply may only be carried out when it is not carrying any voltage.
- The power supply must fulfill the specifications given on the nameplate and in chapter 5 TECHNICAL DATA.
- When installed in a building, a switch or power switch must be provided as a disconnecting device for the MIQ/PS. The interrupt facility must:
  - be installed in the vicinity of the MIQ/PS, easily accessible by the user, and
  - identified as a disconnecting device for the MIQ/PS.
- After it has been installed, the MIQ/PS may only be opened if the mains voltage has been switched off beforehand.

Materials required
- Wire end sleeves, suitable for the power line, with suitable crimping tool
- 1 x cable gland, matched to the cable diameter (see section 3.3 on page 3-2).

Tools
- Cable stripping knife
- Wire stripper
- Phillips screw driver
- Small screw driver.

Preparing the power line

</table>
Connecting the power line

5 Open the module.

Fig. 3-1 Prepared power cable.

Caution
The protective earth conductor must not project into the housing. Otherwise, malfunctions could occur.

Fig. 3-2 Connecting the power line.
### Warning

No free wires are allowed to project into the housing. Otherwise, there is a danger that safe areas could come into contact with dangerous voltages. This could lead to danger when working with the IQ SENSOR NET. Always cut off any wires that are not in use as closely as possible to the cable gland.

4 Maintenance and cleaning

4.1 Maintenance

The MIQ/PS requires no special maintenance. The general maintenance of IQ SENSOR NET components is described in the IQ SENSOR NET system operating manual.

4.2 Cleaning

The cleaning of IQ SENSOR NET components is described in the IQ SENSOR NET system operating manual.
## 5 Technical data

### Note
General technical data on MIQ modules are given in the TECHNICAL DATA chapter of the IQ SENSOR NET system operating manual.

### Caution
If the original fuse needs to be replaced, it may only be replaced by a fuse of the same type and manufacturer.
### Technical data

#### Instrument safety

| Applicable norms | – EN 61010-1  
| – UL 3111-1  
| – CAN/CSA C22.2 No. 1010.1 |

#### Terminal connections

| IQ SENSOR NET connections | 3 Additional connectable SENSORNET terminator (terminating resistor) |
| Terminal type | Screw-type terminal strip, accessible by raising the lid |
| Terminal ranges | Solid wires: 0.2 ... 4.0 mm\(^2\)  
| | AWG 24 ... 12  
| | Flexible wires: 0.2 ... 2.5 mm\(^2\) |

#### Cable glands

| Suitable for cable diameter | 4.5 ... 10 mm and 7.0 ... 13 mm |

#### Caution

Only the line cross-sections specified under ELECTRICAL DATA, Seite 1 can be used for the mains connection.
6  Contact Information

6.1  Ordering & Technical Support

Telephone:  (800) 897-4151
            (937) 767-7241
            Monday through Friday, 8:00 AM to 5:00 PM ET

Fax:  (937) 767-1058

Mail:  YSI Incorporated
       1725 Brannum Lane
       Yellow Springs, OH 45387
       USA

Internet:  www.ysi.com

When placing an order please have the following information available:

YSI account number (if available)  Name and Phone Number
Model number or brief description  Billing and shipping address
Quantity  Purchase Order or Credit Card

6.2  Service Information

YSI has authorized service centers throughout the United States and Internationally. For the nearest service center information, please visit www.ysi.com and click ‘Support’ or contact YSI Technical Support directly at 800-897-4151.

When returning a product for service, include the Product Return form with cleaning certification. The form must be completely filled out for an YSI Service Center to accept the instrument for service. The Product Return form may be downloaded at www.ysi.com and clicking on the ‘Support‘ tab.
