1 Overview

The thermoreactor CR 2200 is a dry temperature control device for laboratory use. It facilitates and secures the digestion using reaction cells.

The thermoreactor has 8 fixed temperature programs.

- 1: 148 °C for 120 minutes
- 2: 120 °C for 30 minutes
- 3: 120 °C for 60 minutes
- 4: 120 °C for 120 minutes
- 5: 100 °C for 60 minutes
- 6: 148 °C for 20 minutes
- 7: 150 °C for 120 minutes
- 8: 100 °C for 30 minutes

The thermoreactor takes 12 reaction cells with an outer diameter of 16 mm.
1.1 Components of the thermoreactor

1. Protection cover
2. Thermoblock with cell shafts
3. Display
4. Keypad
2 Safety

This operating manual contains basic instructions that you must follow during the commissioning, operation and maintenance of the thermoreactor. Consequently, all responsible personnel must read this operating manual before working with the thermoreactor. The operating manual must always be available within the vicinity of the thermoreactor.

Target group

The thermoreactor was developed for use in the laboratory. Thus, we assume that, as a result of their professional training and experience, the operators will know the necessary safety precautions to take when handling chemicals.

General safety instructions

The individual chapters of this operating manual use the following safety labels to indicate different levels of danger:

Warning

indicates instructions that must be followed precisely in order to prevent serious dangers to persons.

Caution

indicates instructions that must be followed precisely in order to avoid slight injuries or damage to the instrument or the environment.

Other labels

Note

indicates notes that draw your attention to special features.

Note

indicates cross-references to other documents, e.g. application reports.
2.1 Authorized use
The authorized use of the thermoreactor is exclusively the heating of samples in cells in a laboratory. The technical specifications as given in chapter 8 TECHNICAL DATA must be observed. Only the operation and running of the measuring instrument according to the instructions given in this operating manual is authorized. Any other use is considered unauthorized.

2.2 General safety instructions
This thermoreactor is constructed and tested in compliance with the EN 61010 safety regulations for electronic measuring instruments. It left the factory in a safe and secure technical condition.

Function and operating safety
The smooth functioning and operational safety of the thermoreactor can only be guaranteed if the generally applicable safety measures and the specific safety instructions in this operating manual are followed during operation.

The smooth functioning and operational safety of the thermoreactor can only be guaranteed under the environmental and electrical operating conditions that are specified in chapter 8 TECHNICAL DATA.

If the thermoreactor was transported from a cold environment to a warm environment, the formation of condensate can impair the functioning of the measuring system. In this event, wait until the temperature of the thermoreactor reaches room temperature before putting the thermoreactor back into operation.

Caution
The thermoreactor is only allowed to be opened by personnel authorized by.
Safe operation

If safe operation is no longer possible, the thermoreactor must be taken out of service and secured against inadvertent operation. Safe operation is no longer possible if the thermoreactor

- has been damaged in transport
- has been stored under adverse conditions for a lengthy period of time
- is visibly damaged
- no longer operates as described in this manual.

If you are in any doubt, please contact the supplier of the thermoreactor.

Obligations of the purchaser

The purchaser of this thermoreactor must ensure that the following laws and guidelines are observed when using dangerous substances:

- EEC directives for protective labor legislation
- National protective labor legislation
- Safety regulations
- Safety datasheets of the chemical manufacturers.
3 Commissioning

3.1 Scope of delivery
- Thermoreactor CR 2200
- Connection cable for mains connection
- Operating manual

Warning
Always keep the original packing including the inner packing. If you have to transport the instrument, the packing protects the instrument optimally from hard shocks. The original packing is also required for the appropriate return transport of the instrument if it has to be repaired. Please note that the warranty does not cover damage caused by inappropriate transport.
3.2 Initial commissioning

Note
The thermoreactor works at an ambient temperature of +5 °C to +40 °C. When the thermoreactor was transported from a cold environment to a warm environment, condensate may occur and cause a malfunction. Wait until the thermoreactor has adjusted to the new environmental conditions before putting it into operation again (see also chapter 8 TECHNICAL DATA).

Setting up the thermoreactor

1. Place the thermoreactor firmly onto a heat-resistant underground.
2. Make sure that there is enough space between the thermoreactor and other instruments or devices that are heat-sensitive.

Adjusting the mains voltage

3. Check whether the arrow on the housing points to the mains voltage (115 or 230 V) given on the fuse holder (2) that is provided by the mains.
4. If the wrong mains voltage is set, perform steps 5 to 7.
5. Pull out the fuse holder (2).
6. Turn the fuse holder (2) so that the arrow on the housing points to the mains voltage (115 or 230 V) provided by the mains.
7. Push the fuse holder (2) in completely.
13

Connecting the mains cable

1 Socket for mains plug
2 Fuse holder

8 Connect the mains cable to the socket 1 on the thermoreactor.
9 Connect the mains cable to an easily available mains socket.
The thermoreactor is now in the Standby mode.
The display shows the name of the instrument.

CR 2200 V X.XX

The thermoreactor is ready for operation.
4 Basic principles of operation

This chapter provides you with basic information on how to operate the thermoreactor.

4.1 Operating and display elements

Using the six keys of the keypad (see section 4.1.1) you control the thermoreactor.

Temperature values, available temperature programs or settings can be viewed in the display (see section 4.1.2).

The control lamps above the operating panel are assigned to the thermoblock. Their color (red or green) and their state (flashing or illuminated) show the current operating state of the thermoreactor (see section 4.1.3).
## 4.1.1 Keys

<table>
<thead>
<tr>
<th>Key</th>
<th>Meaning</th>

<td>active temperature program: reaction temperature reached</td>
</tr>
<tr>
<td>red and green</td>
<td>active temperature program: program canceling selected</td>
<td></td>
</tr>
</tbody>
</table>

If the control lamps are off the thermoreactor is in the Standby mode.
4.2 Operating modes

The thermoreactor has three operating modes:

- Standby
  The display shows the model and version number of the thermoreactor.
  Using the \( \) and \( \) keys simultaneously takes you to the \textit{SETUP} menu. There you can:
  - Set the display contrast (\textit{CONTRAST}:0 to 9, see section 5.4.1)
  - Activate a manual confirmation before the timer for the reaction time is started (\textit{START TIMER:MAN.} or \textit{AUTO}, see section 5.4.2)

- Program selection
  After switching on with \( \) the display shows the current temperature value for the thermoblock. The second display line shows the temperature programs to be selected. The control lamps above the display light up green.

- Active temperature program
  The display shows the current temperature value for the thermoblock. The control lamps above the display light up or flash red.
5  Operation

5.1  Inserting the reaction cells
The reaction cells can either be inserted at room temperature or when the thermoreactor has been preheated.

Caution
When dealing with chemicals always follow the safety data sheets and the regulations for prevention of accidents.

Caution
Observe the analysis specifications of the test sets used.

Warning
The thermoblock can become very hot (150 °C). There is danger of burning when the thermoblock is heated up.

Note
When cold reaction cells are inserted in the preheated thermoblock it can cool down by approx. 3 °C.

1  Insert the filled reaction cells in the cell shafts.
2  Close the protection cover.

5.2  Starting a temperature program

1  Switch the thermoreactor on with .

| 23°C | 1:148°C | 2:00 |

2  Select a temperature program with .
You can select from 8 predefined temperature programs.

| 23°C | 23°C |
| 4:120°C | 2:00 |
3 Start the displayed temperature program with 📊. The control lamps for the thermoblock flash red. The nominal reaction time (in hours and minutes) appears on the display.

Note
The reaction temperature is reached when the temperature in the thermoblock is in a range of ± 1 °C around the adjusted temperature for two minutes constantly. The control lamps of the thermoblock will then light up red.

Sequence with automatic timer
If the start of the timer for the reaction time has been set to automatic in the SETUP menu (START TIMER:AUTO see section 5.4.2), the reaction time automatically starts after the reaction temperature has been achieved. The reaction temperature is kept constant during the reaction time.

After the reaction time has expired the control lamps flash red. The temperature program is finished.

The thermoreactor is in the program selection mode.

As soon as the thermoblock has cooled down to under 50°C, the control lamps switch themselves off.

Sequence with manual timer
If the start of the timer for the reaction time has been set to manual in the SETUP menu (START TIMER:MAN. see section 5.4.2), an S is displayed in front of the nominal reaction time. With this setting the thermoreactor controls the temperature until the timer for the reaction time is started by pressing 📊.

4 Start the timer for the reaction time with 📊. The S in front of the reaction time disappears.

The reaction temperature is kept constant during the reaction time. The control lamps of the thermoblock will then light up red.

After the reaction time has expired the control lamps flash red. Additionally, an acoustic signal sounds.

5 Using 📊 confirm the end of the reaction time for each thermoblock.

The temperature program is finished. The acoustic signal is finished.
The thermoreactor is in the program selection mode. As soon as the thermoblock has cooled down to under 50°C, the control lamps switch themselves off.

### 5.3 Stopping a temperature program

You can terminate a running program at any time.

1. Using [归] [前], terminate the running temperature program.
   The control lamp for the thermoblock flashes red/green.
   The safety query *STOP?* is displayed.

2. Using [归] confirm the safety query *STOP?*.
   The temperature program is finished.
   The control lamps of the thermoblock will then light up green.
   or:
   Using [归] [前], leave *STOP?*.
   The query *STOP?* disappears from the display. The temperature program is continued.

**Note**

While *STOP?* is displayed the temperature program goes on running. As soon as a section of the temperature program is finished (e.g. after the end of the heating period or after the end of the reaction time), the *STOP?* display is overwritten.
5.4 Settings

5.4.1 Setting the display contrast

The display contrast can be set in 10 steps.

1. Switch to the Standby mode.

2. Keep the key depressed while you press to switch to the SETUP menu. SETUP and, in the second line, an editable parameter are displayed.

3. Using select CONTRAST.

4. Using edit the contrast setting. The editing is marked on the display by *.

5. Using set the contrast from 0 to 9.

6. Using confirm the changes. The marking on the display (*) disappears.

7. Using leave the SETUP menu. The changes are stored. The thermoreactor is switched on (operation mode: program selection).

5.4.2 Setting the timer for the reaction time

After the start of a temperature program the thermoblock starts heating up. Depending on the setting, the timer for the reaction time starts automatically after the reaction temperature has been reached or only after confirmation by keypressing.

With the setting START TIMER: AUTO the timer for the reaction time starts immediately after the reaction temperature has been reached.

With the setting START TIMER: MAN, the timer for the reaction time
starts after confirmation by keypressing only.

1. Switch to the Standby mode.

2. Keep the \( \text{②} \) key depressed while you press \( \text{①} \) to switch to the **SETUP** menu. **SETUP** and, in the second line, an editable parameter or a temperature program are displayed.

3. Using \( \text{④} \) \( \text{⑤} \) select **START TIMER**.

<table>
<thead>
<tr>
<th>SETUP</th>
</tr>
</thead>
<tbody>
<tr>
<td>START TIMER: MAN.</td>
</tr>
</tbody>
</table>

4. Using \( \text{④} \) set the start of the timer for the reaction time. The editing is marked on the display by \( * \).

5. Using \( \text{④} \) \( \text{⑤} \) select **MAN.** or **AUTO**.

6. Using \( \text{④} \) confirm the changes. The marking on the display \( * \) disappears.

7. Using \( \text{④} \) leave the **SETUP** menu. The changes are stored. The thermoreactor is switched on (operation mode: program selection).
6 Maintenance, cleaning, disposal

6.1 Maintenance
The CR 2200 thermoreactor is maintenance-free.

6.2 Exchanging the fuses

1 Disconnect the line power cable from the thermoreactor.

2 Pull out the fuse holder (2).

3 Exchange one or both fuses (3.15 AT).

4 Turn the fusion holder (2) so that the arrow on the housing points to the line voltage (115 or 230 V) provided by the power line.

5 Push the fusion holder (2) completely in.
6.3 Cleaning the enclosure
Wipe the thermoreactor with a damp cloth.

Caution
The housing is made of synthetic material. Thus, avoid contact with acetone or detergents that contain solvents. Remove any splashes immediately.

6.4 Cleaning of the thermoblock of spilled cell contents
If liquid penetrated a thermoblock (e.g. from a cell), clean the thermoblock as follows:

Warning
Cells can contain poisonous or corrosive substances. If the content has been set free observe the danger notes on the cell. If necessary take the corresponding protective measures (protective goggles, protective gloves etc.).

Warning
The thermoblock can become very hot (150 °C). There is danger of burning when the thermoblock is heated up.

1. Switch off the thermoreactor and disconnect the power plug.
2. Allow the thermoreactor to cool down.
3. Unscrew the cover plate on top of the thermoblock.
4. Clean the cover plate, block surfaces and borings with a damp cloth.
5. Screw on the cover plate again.

6.5 Disposal
Dispose of the thermoreactor as electronic waste at an appropriate collection point. It is illegal to dispose of the thermoreactor in household refuse.

10.2  Service Information

YSI has authorized service centers throughout the United States and Internationally. For the nearest service center information, please visit www.ysi.com and click ‘Support’ or contact YSI Technical Support directly at 800-897-4151.

When returning a product for service, include the Product Return form with cleaning certification. The form must be completely filled out for an YSI Service Center to accept the instrument for service. The Product Return form may be downloaded at www.ysi.com and clicking on the ‘Support’ tab.
1) The tissue in plants that brings water upward from the roots;  
2) a leading global water technology company.

We’re 12,500 people unified in a common purpose: creating innovative solutions to meet our world’s water needs. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. We move, treat, analyze, and return water to the environment, and we help people use water efficiently, in their homes, buildings, factories and farms. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise, backed by a legacy of innovation.
