1 Overview

1.1 General features

The compact pHotoFlex® STD handheld precision meter enables you to carry out the following measurements quickly and reliably:

- Concentration measurements (colorimetric measurements)
- Absorbance measurements
- Transmission measurements

The pHotoFlex® STD handheld meter provides the maximum degree of operating comfort, reliability and measuring certainty for all applications.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Keypad</td>
</tr>
<tr>
<td>2</td>
<td>Display</td>
</tr>
<tr>
<td>3</td>
<td>Cell shaft (folded out for a 16 mm cell to be inserted)</td>
</tr>
<tr>

</tr>
</tbody>
</table>
1.2 Keypad

Key functions

Select the measured variable \(<M>\):
- Concentration
- Absorbance
- % Transmission

Open the menu for adjustment measurements (blank values, zero adjustment)
\(<\text{CAL/ZERO}>\)

Select a program for concentration measurement
\(<\text{PROG}>\)

Open menus / confirm entries / start measurement
\(<\text{START/ENTER}>\)

Call up the Configuration menu (all settings are made here)
\(<\text{MENU}>\)

Switch over between available citation forms
\(<\text{FORM}>\)

Switch over between available units \(<\text{UNIT}>\)

Switch the meter on or off
\(<\text{ON/OFF}>\)

Output display contents to RS232 interface
\(<\text{PRT}>\)
Keys with an additional number printed on are assigned doubly. This enables to directly enter numbers in special menus. Thus, you can, for example, conveniently enter the date and time via the number keys.

### 1.3 Display

The graphic display shows all information of the current measurement in the measured value display. The illumination enables to read the display even in the darkness.

**Example**

<table>
<thead>
<tr>
<th>Photometry / Concentration</th>
<th>Measured parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1.29 mg/l</strong></td>
<td></td>
</tr>
<tr>
<td>83: A6/25 MC NH4-N</td>
<td>Program and citation form</td>
</tr>
<tr>
<td>16 mm 0.20 - 8.00 mg/l</td>
<td>Diameter of the cell and measuring range</td>
</tr>
<tr>
<td>01.12.11 15:12</td>
<td>Status line with date and time</td>
</tr>
</tbody>
</table>

### 1.4 Socket field

Open the *Store* menu: `<STO>`

Quick storing: 2 x `<STO>`

Highlight menu items or selection

Set values

`<▲>,<▼>`

Switch to the next higher menu level / cancel input

`<ESC>`
Identifying the connectors

<p>| | |</p>
<table>

<td>RS232 serial interface</td>
</tr>
</tbody>
</table>

### 1.5 LabStation (optional)

The LabStation, which is available as an accessory, enables you to use the pHotoFlex® STD conveniently in the laboratory (see LabStation operating manual).

Laboratory operation with the LabStation enables the following additional functions:

- With photometric measurements, the zero measurement is retained even after switching the pHotoFlex® STD off and on again
- You can connect a bar code reader for the simplified calling up of programs
- The LSdata software included serves to easily enter user-defined programs
- Operation with power pack and rechargeable battery (included in the scope of delivery of the LabStation). The rechargeable battery in the pHotoFlex® STD is automatically charged as soon as the meter is placed in the LabStation.
2 Safety instructions

2.1 Safety information

2.1.1 Safety information in the operating manual

This operating manual provides important information on the safe operation of the meter. Read this operating manual thoroughly and make yourself familiar with the meter before putting it into operation or working with it. The operating manual must be kept in the vicinity of the meter so you can always find the information you need.

Important safety instructions are highlighted in this operating manual. They are indicated by the warning symbol (triangle) in the left column. The signal word (e.g. "Caution") indicates the level of danger:

**CAUTION**
indicates a possibly dangerous situation that can lead to slight (reversible) injury if the safety instruction is not followed.

**NOTE**
indicates a possibly dangerous situation where goods might be damaged if the actions mentioned are not taken.

2.1.2 Safety signs on the meter

Note all labels, information signs and safety symbols on the meter and in the battery compartment. A warning symbol (triangle) without text refers to safety information in this operating manual.

2.1.3 Further documents providing safety information

Observe the safety datasheets of the test reagents when working with photometric test sets.
2.2 Safe operation

CAUTION
Danger of eye damage by visible and invisible LED radiation. In the cell shaft there are light emitting diodes (LED) of the 1M class. Do not look at the radiation using optical instruments. With normal, authorized use there is no hazard.

2.2.1 Authorized use
This meter is authorized exclusively for the following measurements:

- Analysis of substances in water and aqueous solutions using round cells
- Concentration measurement
- Absorbance and transmission measurement

The fields of application are mobile use and use in the laboratory. Only the operation and running of the meter according to the instructions and technical specifications given in this operating manual is authorized (see chapter 7 TECHNICAL DATA). Any other use is considered unauthorized.

2.2.2 Requirements for safe operation
Note the following points for safe operation:

- The meter may only be operated according to the authorized use specified above.
- The meter may only be supplied with power by the energy sources mentioned in this operating manual.
- The meter may only be operated under the environmental conditions mentioned in this operating manual.
- The meter may only be opened if this is explicitly described in this operating manual (example: Inserting the batteries).

2.2.3 Unauthorized use
The meter must not be put into operation if:

- it is visibly damaged (e.g. after being transported)
- it was stored under adverse conditions for a lengthy period of time (storing conditions, see chapter 7 TECHNICAL DATA).
3 Commissioning

3.1 Scope of delivery

- Handheld meter pHotoFlex® STD
- 4 batteries 1.5 V type AA
- 1 empty cell 16 mm
- 2 empty cells 28 mm
- Microfiber cloth to clean the meter
- Quick start guide English
- Key overview / Program list
- CD-ROM with
  - Detailed operating manual
  - Photometry analysis manual with analysis specifications
  - Software to program user-defined methods
- Optional: LabStation with LSdata PC software, rechargeable battery and universal power pack

The optional parts of the scope of delivery are available as accessories (see section 8.1).

3.2 Power supply

3.2.1 General information

The meter is supplied with power by 4 batteries 1.5 V type AA (see section 3.2.2).

When you are using the LabStation, you can also supply the meter with power with a rechargeable battery. The rechargeable battery is included in the scope of delivery of the LabStation and is inserted in the battery compartment instead of the batteries (see LabStation operating manual).

Automatic switchoff function

The meter has an automatic switch-off function in order to save the batteries or rechargeable battery (see section 4.4).

Display illumination

During operation with the batteries or rechargeable battery the meter automatically switches off the display illumination if no key is pressed for 30 seconds. The illumination is switched on again with the next key-stroke. The display illumination can also be switched off completely (see section 4.4.2).

The LoBat display indicator appears when the batteries or rechargeable battery are nearly discharged.
### 3.2.2 Inserting/exchanging the batteries

**NOTE**
Make sure that the poles of the batteries are positioned correctly. The ± signs on the batteries must correspond to the ± signs in the battery compartment.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Open the battery compartment:</td>
</tr>
<tr>
<td></td>
<td>– Unscrew the two screws (1) on the underside of the meter,</td>
</tr>
<tr>
<td></td>
<td>– Remove the lid of the battery compartment (2).</td>
</tr>
<tr>
<td>2</td>
<td>If necessary, take four old batteries out of the battery compartment.</td>
</tr>
<tr>
<td>3</td>
<td>Insert four batteries (3) in the battery compartment.</td>
</tr>
<tr>
<td>4</td>
<td>Close the battery compartment and fix it with the screws.</td>
</tr>
</tbody>
</table>
3.3 Initial commissioning

Perform the following activities:

- For
  - Battery operation: Insert the batteries (see section 3.2.2)
  - Operation with LabStation and rechargeable battery: Insert the rechargeable battery, connect the LabStation and insert the meter in the LabStation (see LabStation operating manual)
- Switch on the meter (see section 4.1)
- Set the language as necessary (see section 4.3.3)
- Set the date and time as necessary (see section 4.3.4)

When you set the language, date and time according to the mentioned sections of this operating manual you will quickly become familiar with the simple operation of the pHotoFlex® STD.
4 Operation

4.1 Switching on the meter

Switching on

Press the <ON/OFF> key.
The Start menu appears for 30 seconds. The status line indicates the meter designation and the version number of the software.

After a few seconds the meter automatically switches to the measured parameter used last.

Switching off

Press the <ON/OFF> key.

Automatic switchoff function

The meter has an automatic switch-off function in order to save the batteries or rechargeable battery (see section 4.4). The automatic switchoff switches off the meter if no key is pressed for an adjustable period.

The automatic switchoff function is not active

● if the power is supplied by the LabStation (optional),
● if the Timer or Analysis timer function is on.

Display illumination with battery-powered operation

During operation with batteries or rechargeable battery the meter automatically switches off the display illumination if no key is pressed for 30 seconds. The illumination is switched on again with the next key-stroke.
4.2 Inserting a cell

To be able to insert cells in the pHotoFlex® STD, the cell shaft has to be prepared to take in a cell.

1. Push the dust cover (1) upward. The cell shaft for 28 mm cells is open.
   - Insert a 28 mm cell (see below)
   - Insert a 16 mm cell (see page 19)

Inserting a 28 mm cell

2. Insert the cell so that it is positioned on the bottom of the cell shaft.
   The cell is ready to be measured.
Inserting a 16 mm cell

1. Put the fold-out cell shaft (2) in an upright position until it locks into place.

2. Pull upwards the height adapter (3). The cell shaft is extended.

3. Open the external light cover (4) of the cell shaft.
For optimum measurement results, the cell must always be covered by the external light cover. Otherwise, the external light can falsify the measurement result.

### 4.3 General operating principles

This section contains basic information on the operation of the pHotoFlex® STD.

#### Operating elements, display

An overview of the operating elements and the display is given in section 1.2 and section 1.3.

#### Operating modes, navigation

An overview of the operating modes of the pHotoFlex® STD and the navigation through menus and functions can be found in section 4.3.1 and section 4.3.2.

#### 4.3.1 Operating modes

The instrument has the following operating modes:

- **Measuring**
  - The meter determines measurement data and displays the results in the measured value display

- **Calibrating**
  - The meter carries out a blank value measurement or zero adjustment

- **Data transmission**
  - The meter transmits datasets to the serial interface

- **Configuration**
  - The display indicates a menu with further menus, settings and functions

<table>
<thead>
<tr>
<th>Step</th>
<th>Instruction</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>Insert the 16 mm cell (marking points to the front) so that it is positioned on the bottom of the cell shaft.</td>
</tr>
<tr>
<td>5</td>
<td>Close the external light cover (4). The cell is ready to be measured.</td>
</tr>
</tbody>
</table>
4.3.2 Navigation

Measured value display  
In the measured value display, you can
- select the measured parameter with <M>:
  - Concentration
  - Absorbance
  - % Transmission
- open the menu with <MENU>
- switch to the superordinate Start menu with <ESC>.

Menus and dialogs  
The menus for settings and dialogs in procedures contain further sub-elements. The selection is made with the <△> <▼> keys. The current selection is highlighted as white text on a black background.

- **Menus**  
The name of the menu is displayed at the upper edge of the frame. Menus are opened by confirming with <START/ENTER>. Example:

<table>
<thead>
<tr>
<th>Configuration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Photometry</td>
</tr>
<tr>
<td>Timer</td>
</tr>
<tr>
<td>System</td>
</tr>
<tr>
<td>Info</td>
</tr>
</tbody>
</table>

- **Settings**  
Settings are indicated by a colon. The current setting is displayed on the right-hand side. With <START/ENTER>, the selection of the possible settings is opened. Subsequently, the setting can be changed with <△> <▼> and <START/ENTER>. Example:

<table>
<thead>
<tr>
<th>Display</th>
</tr>
</thead>
<tbody>
<tr>
<td>Illumination:</td>
</tr>
<tr>
<td>Auto off</td>
</tr>
<tr>
<td>Contrast:</td>
</tr>
<tr>
<td>Brightness:</td>
</tr>
</tbody>
</table>

- **Functions**  
Functions are designated by the name of the function. They are immediately carried out by confirming with <START/ENTER>. Example:
The principles of navigation are explained in the two following sections by reference of examples:

- Setting the language (section 4.3.3)
- Setting the date and time (see section 4.3.4).

### 4.3.3 Example 1 on navigation: setting the language

The following example describes in the language of the country how to set the language. On delivery, English is set as the language in the pHotoFlex® STD. During initial commissioning, the language setting is done in the menu, Configuration / System / Language.

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
</table>
| 1    | In the measured value display:  
      Using <MENU>, open the Configuration menu.  
      The instrument is in the configuration mode. |
| 2    | Select the System menu with <▲> <▼>.  
      The current selection is highlighted as white text on a black background. |
| 3    | Open the System menu with <START/ENTER>. |
4.3.4 Example 2 on navigation: setting the date and time

The meter has a clock with a date function. The date and time are indicated in the status line of the measured value display. When storing measured values and calibrating, the current date and time are automatically stored as well.

Numerals are generally entered via the number keys.
The correct setting of the date and time and date format is important for the following functions and displays:

- Current date and time
- Calibration date
- Identification of stored measured values.

Therefore, check the time at regular intervals.

After a fall of the supply voltage (empty batteries or rechargeable battery), the date and time are reset to 01.01.2003, 00:00 hours.

### Setting the date, time and date format

The date format can be switched from the display of day, month, year (dd.mm.yy) to the display of month, day, year (mm/dd/yy or mm.dd.yy).

1. In the measured value display:
   - Using <MENU>, open the `Configuration` menu.
   - The instrument is in the configuration mode.
2. Select and confirm the `System / Continue … / Date/time` menu with <▲> <▼> and <START/ENTER>.

### Date/time

<table>
<thead>
<tr>
<th>Time</th>
<th>14:53:40</th>
</tr>
</thead>
<tbody>
<tr>
<td>Date</td>
<td>01.02.05</td>
</tr>
<tr>
<td>Date format</td>
<td>dd.mm.yy</td>
</tr>
</tbody>
</table>

3. Select and confirm the `Time` menu with <▲> <▼> and <START/ENTER>.
   - A display for the entry of numerals with the number keys opens up.
4 Enter the time using the number keys. The digit to be changed is displayed underlined.

In the case of wrong entries, you can cancel the procedure with <ESC>. After canceling with <ESC>, it is possible to enter all digits once again. The new digits are only taken over by confirming with <START/ENTER>.

5 Confirm the setting with <START/ENTER>. The time is set.

6 Set the current Date as necessary. The setting is made similarly to that of the time.

7 Change the date format as necessary.

8 To make further settings, switch to the next higher menu level with <ESC>.
   or
   Switch to the measured value display with <M>. The instrument is in the measuring mode.

**Info**
4.4 System settings (System menu)

The following instrument features and general functions can be found in the Configuration / System menu:
- Language selection (Language)
- Memory and database functions (Store)
- Display settings (Display)
- Restore basic settings (Reset)
- Configuration of the interface for PC (Interface)
- Setting the date/time (Date/time)
- Setting the switch-off time (Switchoff time)
- Setting the keyboard sound (Beep)

Settings/functions

The settings can be found in the Configuration / System menu. To switch to the Configuration menu, press the <MENU> key.

<table>

4.4.1 Measured value memory

In the Measured value memory menu, you find functions to display and edit the stored measurement datasets:

- Display the measurement datasets on the screen (Display)
- Download the measurement datasets to the RS232 interface (RS232 download)
- Set up filter rules for the stored measurement datasets (Data filter)
- Erase all stored measurement datasets (Delete)
- Information on the number of occupied memory locations

The settings can be found in the Configuration / System / Measured value memory menu. To switch to the Configuration menu, press the <MENU> key.

### Settings/functions

<table>
<thead>
<tr>
<th>Menu item</th>
<th>Setting/function</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| **Display**      | -                | Displays in pages all measurement datasets that correspond to the filter settings. Further options:  
- Scroll through the datasets with <▲> <▼>.  
- Output the displayed dataset to the interface with <PRT>.  
- Quit the display with <ESC>. |
| **RS232 download** | -                | Downloads to the interface all measurement datasets that correspond to the filter settings. The download is ordered according to the date and time.  
The process can take several minutes. To terminate the process prematurely, press <ESC>. |
| **Data filter**  | see section 4.6.2 | Allows to set filter criteria in order to display and download datasets to the interface. |
| **Delete**       | -                | Erases the entire contents of the measuring data memory, independent of the filter settings.  
**Note:**  
All calibration data remain stored when this action is performed. |

All details on the subjects of memory and stored data is given in section 4.6.2.
4.4.2 **Display**

In the *Configuration / System / Display* menu, you set the display features:

- Switching on/off the display illumination (*Illumination*)
- Display contrast (*Contrast*)

The settings can be found in the *Configuration / System / Display* menu. To switch to the *Configuration* menu, press the `<MENU>` key.

<table>
<thead>
<tr>
<th>Settings</th>
<th>Menu item</th>
<th>Setting</th>
<th>Explanation</th>

4.5 Photometry

4.5.1 General information

Photometric measurements serve to determine chemical substances in liquid samples. For this determination, the substance to be determined has to be present in a form that is suitable for photometric measurement. At the same time, possible disturbing factors have to be excluded.

Before measurement, the sample has to be pretreated in order to bring the substance to be determined into the form that is suitable for measurement and at the same time exclude disturbing factors. Pretreatment of the sample is described in the analysis specification.

In a simple case, pretreatment can be to dissolve a solid substance in water; it can, however, also include chemical conversions, e. g. a digestion.

The chemicals required in the analysis specification are available as test sets.

Suitable analysis specifications for test sets can be found in the photometry analysis manual (on CD-ROM). There you will also find further instructions on handling chemicals and on how to proceed when applying the analysis specifications.

Methods and the corresponding method data for many test sets are stored as programs in the pHotoFlex® STD. A program number is assigned to each program.

The stored method data are loaded when the program number is entered or read in with the aid of a bar code reader.

You can look up an overview of the available methods in the photometry analysis manual and display it on the screen of the pHotoFlex® STD (see section 4.5.8).

You can measure the following parameters with the pHotoFlex® STD:

- Concentration [mg/l]
- % Transmission []
- Absorbance []
Preparatory activities

Perform the following preparatory activities when you want to measure:

1. Clean the exterior of the cells before filling them with sample and also before measuring as necessary (see section 5.2.2).
2. For measurement, place the pHotoFlex® STD on a horizontal surface.

4.5.2 Settings for photometric measurements

For photometric measurements, the following settings are available in the Configuration / Photometry menu:

- Setting the measured parameter
- Displaying a list of all programs
- Setting the dilution factor
- Switching on or off the analysis timer
- Resetting the settings for photometric measurements

The settings can be found in the Configuration / Photometry menu. To switch to the Configuration menu, press the <MENU> key.

### 4.5.3 Measuring the concentration

1. If necessary, press the `<M>` key several times until the measured parameter *Concentration* is selected.

From the second concentration measurement, the data of the program last used is automatically displayed here.

With `<▲>` `<▼>` you can quickly switch between the ten programs last used.

To select a program, you can as an alternative also read in the program number of an analysis specification with a bar code reader (see section 8.2). The following step three is skipped. You can directly start measuring.

The program number of the test is given in the analysis specification, in the list of available programs and, with some tests, on the packing of the test (under the bar code).

2. Open the *Program number* display with `<PROG>`, enter the required program number with the number keys and confirm with `<START/ENTER>`.

   or (from the second concentration measurement):

   Select a program out of the last ten programs with `<▲>` `<▼>`. The program data is displayed.

   If a program number is selected that requires a measured blank value, the menu automatically guides to the blank value measurement.
3 Insert the cell (see section 4.2).

4 Start the measurement with <START/ENTER>. Measurement is started. The result is displayed.

A blank value measured by the user is used.
4.5.4 Blank value (reagent blank value)

A blank value is required for every concentration measurement. For some programs (methods) for concentration measurement, the blank values are already stored in the meter. They are used automatically. For all other programs, the blank value has to be determined separately before the first measurement. Each stored reagent blank value can be replaced by a blank value determined by the user.

You will find more information on blank values in the photometry analysis manual. A table with the programs and required blank values is included in the analysis specifications.

A blank value is always stored for the program that has just been called up. It remains stored until it is erased (menu item, Delete blank value) or overwritten. The Reset function erases all blank values measured by the user and restores the blank values stored in the factory.

If a blank value measured by the user is stored for a program, this blank value is used for measurement. The usage of the blank value measured by the user is documented and also indicated in the measured value display.

Measuring the blank value

1. If necessary, press the <M> key several times until the measured parameter Concentration is selected.
2. Select a program with <PROG> as necessary.
3. Open the adjustment menu with <CAL/ZERO>.
4. Using <▲> <▼> and <START/ENTER>, select and start the Measure blank value function. The menu-guided blank value measurement begins. Follow the instructions on the display.
5 Insert a cell with blank sample (see section 4.2).

6 Start the measurement of the blank value with <START/ENTER>.

   After measuring, the result of the blank value measurement is displayed and stored.
   The result is displayed as **Blank value measurement successful!** or **Blank value measurement erroneous!**.

7 Confirm the result with <START/ENTER>.
   The blank value measurement is completed.
   The meter is ready to measure.
   or:
   Discard the result with <ESC>.
   Subsequently, carry out a new blank value measurement.
4.5.5 Standard adjustment (user calibration)

With some of the programs (methods) for concentration measurement, you can optimize the calibration curve stored in the meter with the aid of the Standard adjustment function.

A standard adjustment is only valid if the deviation compared to the original calibration is no more than 30%.

A standard adjustment is always stored for the program that is presently called up. A standard adjustment is only deleted if
- a new standard adjustment is carried out
- the standard adjustment is erased manually
- the meter is reset to delivery status (Reset function)

Standard adjustment

1. If necessary, press the <M> key several times until the measured parameter Concentration is selected.

2. Select a program with <PROG> as necessary.

The following measurement of the standard applies only to the selected program.

3. Using <CAL/ZERO>, open the Photometry \ Adjustment menu.

4. Open the Standard adjustment menu with <▲> <▼> and <START/ENTER>.

5. Using <▲> <▼> and <START/ENTER>, select and start the Measure standard function.

The menu-guided standard measurement begins. Follow the instructions on the display.
If a standard adjustment is stored for a program, the standard adjustment is automatically used for measurement. The usage of the standard adjustment is documented together with the measured value and indicated in the measured value display with [Cal].
4.5.6 Absorbance / % Transmission, measuring

The transmission measurement is not described separately in the following example as it operates in exactly the same way as the absorbance measurement. The result of the measurement is displayed in % Transmission.

1. Press the <M> several times as necessary until the measured parameter Absorbance (or % Transmission) is selected.

2. Select the cell diameter with <▲> <▼> and confirm with <START/ENTER>.

3. Select the wavelength with <▲> <▼> and confirm with <START/ENTER>.

4. Clean the cell (see section 5.2.2).

5. Insert the cell (see section 4.2).

6. Start the measurement with <START/ENTER>. The measurement result is displayed when the measurement is finished.
4.5.7 Zero adjustment

The zero adjustment, i.e., measuring and storing the absorbance of a cell filled with water, is necessary after the meter is switched on.

Additionally, we recommend to carry out a zero adjustment if the ambient temperature has changed.

Only perform the zero adjustment against distilled water in an optically perfect cell. The zero adjustment must be performed separately for each cell type.

1. If necessary, press the <M> key several times until the measured parameter Concentration is selected.

2. Press the <CAL/ZERO> key.
   The menu for adjustment measurements opens up.

3. Using <▲> <▼> and <START/ENTER>, select and start the Zero adjust. function.
   The menu-guided zero adjustment starts.
   Follow the instructions on the display.
If Calibration error! was displayed as the calibration result, a note automatically reminds you of another zero adjustment before the next measurement. Measuring is not possible without a valid zero adjustment.

If Calibration error! was displayed as the calibration result, a note automatically reminds you of another zero adjustment before the next measurement. Measuring is not possible without a valid zero adjustment.

4.5.8 Programs

**Displaying program data**

You can view the most important data of all methods. The method data is ordered according to the program number.

4 Insert the cell (see section 4.2).

5 Set another cell with ▲ ▼ and <START/ENTER> as necessary.

6 Start the measurement of the zero adjustment with <START/ENTER>.

After measuring, the result of the zero adjustment is displayed and stored.
- Zero adjust. successful! (successful zero adjustment) or
- Calibration error! (zero adjustment not successful) is displayed as the result.

The zero adjustment is completed.

7 Confirm the result with <START/ENTER>.

The zero adjustment is completed.

The meter is ready to measure.
This data is also to be found in the photometry analysis manual in the overview of the test sets and in the individual analysis specifications for the test sets.

**Updating programs**

Under [www.YSI.com](http://www.YSI.com) on the Internet, you can always find the latest software version with the newest programs and method data for your pHotoFlex® STD (see section 11).

**User-defined programs**

User-defined programs (methods) can be stored under program numbers between 900 and 909. You can store up to 50 user-defined programs (see section 4.11).
4.5.9  Analysis timer

Measuring according to analysis instructions often means there are waiting periods between the individual steps. These waiting periods (time intervals) are stored in the instrument with the program data for each program. The active Analysis timer function automatically reminds you to observe these time intervals by means of the menu guidance.

If you want to manually enter time intervals, use the Timer function (see section 4.5.10).

The Analysis timer with the required time interval is automatically displayed at the due point.
Start the Analysis timer with the `<START/ENTER>` key.
It is not possible to shorten the time interval.
An acoustic signal sounds when the adjusted time interval has expired.

The Analysis timer function is switched on or off in the Configuration / Photometry / Analysis timer menu.
This setting generally applies to all measurements with methods according to analysis specification.

4.5.10  Timer

When measuring according to analysis specifications, waiting periods often have to be kept between individual steps of the method. With the Timer function you manually set a time interval.

If you want to be automatically reminded of the given time intervals, use the Analysis timer function (see section 4.5.9).

The timer is displayed in the measured value display. It always displays the remaining time of the adjusted time interval. When the adjusted time interval has expired, the timer indicates 00:00:00 and an acoustic signal sounds.

The Timer function is started in the Configuration / Timer menu by entering a time interval.
4.5.11 Measuring diluted samples

If the concentration of a test sample exceeds the measuring range of a method, you can dilute the sample by a factor 1 ... 99 so that the concentration of the diluted test sample is within the measuring range of the method (see photometry analysis manual). Thus a valid measurement is possible.

After entering the factor for the dilution the meter converts the concentration to that of the undiluted sample. The display then indicates the measured value of the undiluted sample.

Entering the factor of the dilution

1. Select the program for which a dilution factor is to be entered.

2. Open the Configuration / Photometry / Dilution menu. The current factor of the dilution is displayed.

3. Open the display for the entry of numerals with <START/ENTER>.

4. Enter the factor of the dilution with the number keys. The factor has to be a whole number between 0 ... 99.

5. Confirm the factor with <START/ENTER>.

6. Exit the Dilution menu with <ESC>. For the following measurements with the selected program, the concentration of the undiluted sampled is displayed as the measurement result.

The entered dilution factor is only valid for the selected program. The dilution factor is erased if

- the meter is switched off
- a different program number is selected
- the factor 0 is entered in the Dilution menu.

If a dilution factor is active, it is indicated on the display during measurement in the form [x + 1].
4.6  Data storage

The meter has 100 storage locations for measurement datasets. You can transmit measured values (datasets) to the data memory with the <STO> key.

Each data storage process transmits the current dataset to the interface at the same time.

The number of memory locations that are still free is displayed in the Store menu. The number of memory locations that are occupied is displayed in the System / Measured value memory menu.

Measurement dataset

A complete dataset includes:

- Date/time
- ID number (ID)
- Program number
- Measured value
- Citation form
- Use of a blank value (BV)
- Dilution (x +1)
4.6.1 Storing measurement datasets

Proceed as follows to transmit to the data memory and simultaneously output to the interface a measurement dataset:

1. Press the <STO> key. The Store display appears.

   Store (996 free)
   01.12.2011  15:10:11
   PROG 86
   1.12 mg/l NH4-N
   [BV]
   assign ID: 1

2. Using <▲> <▼>, <START/ENTER> and the number keys, change and confirm the ID number (ID) as necessary (0 ... 999).

3. Using <START/ENTER> or <STO>, confirm Store.
   The dataset is stored. The meter switches to the measured value display.

If the memory is full

<STO>. It is stored with the ID last set.
You can erase the entire memory (see section 4.6.5), or overwrite the oldest dataset with the next storing procedure.
A security prompt appears before a dataset is overwritten.
4.6.2 Filtering measurement datasets

The functions to display and download stored measurement datasets (see section 4.4.1) refer to all stored measurement datasets that correspond to the specified filter criteria.

The settings are in the Configuration / System / Measured value memory / Data filter menu.
To switch to the Configuration menu, press the <MENU> key.

<table>

4.6.3 Displaying measurement datasets

You can read out stored datasets to the display. Only those datasets are displayed that correspond to the selected filter criteria (see section 4.6.2).

Start reading out the data to the display in the menu, Configuration / System / Measured value memory / Display.

**Representation of a dataset**

<table>
<thead>
<tr>
<th>Measured value memory</th>
</tr>
</thead>
<tbody>
<tr>
<td>8: 02.12.2011 10:04:47</td>
</tr>
<tr>
<td>ID 0 / PROG 86</td>
</tr>
<tr>
<td>11.4 mg/l NH4-N</td>
</tr>
<tr>
<td>[BV] [1 + 1]</td>
</tr>
</tbody>
</table>

Further datasets that correspond to the filter criteria are displayed with the <▲> <▼> keys.

**Quitting the display**

To quit the display of stored measurement datasets, you have the following options:

- Switch directly to the measured value display with <M> (short pressure).
- Leave the display and switch to the superordinate menu with <ESC> or <START/ENTER>.

4.6.4 Download the measurement datasets to the RS232 interface

You can download stored datasets to the RS232 interface. Only those datasets are downloaded that correspond to the selected filter criteria (see section 4.6.2).

The datasets are downloaded in the specified output format (see section 4.7.3).

The data download to the interface is started in the menu, Configuration / System / Measured value memory / RS232 download.
4.6.5 Erasing stored measurement datasets

You can erase the stored measurement datasets altogether if you no longer need them.

Erasing all measurement datasets is done in the menu, Configuration / System / Measured value memory / Delete.

Erasing individual datasets is not possible. If all memory locations are occupied, however, it is possible to overwrite the oldest dataset at a time. A security prompt appears before a dataset is overwritten.

4.7 Transmitting data (RS 232 interface)

Via the RS 232 interface, you can transmit data to a PC.

4.7.1 Connecting a PC

Connect the interface to the devices via the AK540/B (PC) cable.

The RS232 interface is not galvanically isolated. When connecting an earthed PC, measurements cannot be performed in earthed media as incorrect values would result.

Set up the following transmission data on the PC:

<table>
<thead>
<tr>
<th>Baud rate</th>
<th>can be selected from: 1200, 2400, 4800, 9600, 19200</th>

4 DTR
5 SG
6 CTS

4.7.2 Configuring the RS232 interface

For an error-free data transmission, the RS232 interface should be set to the same transmission speed (*Baud rate*) for the pHotoFlex® STD and PC.

You can set the following values for the baud rate on the pHotoFlex® STD: 1200, 2400, 4800, 9600, 19200.

The baud rate is selected in the menu, *Configuration / System / Interface / Baud rate*.

4.7.3 Selecting the output format of datasets

For downloading data to the interface you can select the output format.

It is selected in the menu, *Configuration / System / Interface / Output format*.

The ASCII output format delivers formatted datasets. The CSV output format delivers datasets separated by ",,\".

Output format, ASCII

4.9 Meter information

The following meter information is listed in the Configuration / Info menu:

- Model designation
- Software version
- Version number(s) of the stored program data
- Series number of the meter

![Info]

- Model: pHotoFlex
- Software: V 1.70
- Prog.: V 1.24 W
- Ser. no.: 12345678

4.10 Software update

With a software update you obtain the current software with all new programs and method data (see section 11).

A software update comprises

- new instrument software
- new programs (methods)
- revisions of existing methods

The current software version can be found on the Internet under www.YSI.com.

The proceeding for updating the software is given in the appendix (see section 11).
4.11 Administrating user-defined methods

4.11.1 Options for method administration

User-defined programs can be
- entered
- read out
- erased.

To store user-defined programs (methods) in the meter, determine a calibration line for your method yourself and transmit the data of this calibration line to the pHotoFlex® STD.

Administration of the method data can be carried out in the LSdata software (see LSdata operating manual) or with the aid of a terminal program (see section 4.11.2).

You need the following data in any case:

<table>
<thead>
<tr>
<th>Data</th>
<th>Possible entries/examples</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program No:</td>
<td>900 ... 949</td>
</tr>
<tr>
<td>Model:</td>
<td>Any name (max. 5 characters)</td>
</tr>
<tr>
<td>Cell [mm]:</td>
<td>16 or 28</td>
</tr>
<tr>
<td>Wave length [nm]:</td>
<td>436, 517, 557, 594, 610 or 690</td>
</tr>
<tr>
<td>MRB (measuring range start):</td>
<td>e.g. 0.05</td>
</tr>
<tr>
<td>MRE (measuring range end):</td>
<td>e.g. 8.00</td>
</tr>
<tr>
<td>E0 (reagent blank value):</td>
<td>e.g. 0.0</td>
</tr>
<tr>
<td>Slope:</td>
<td>e.g. 1.0</td>
</tr>
<tr>
<td>Resolution:</td>
<td>0.0001, 0.001, 0.01, 0.1, 1, 2, 5, 10 or 100</td>
</tr>
<tr>
<td>Citation form:</td>
<td>e.g. PO4-P (max. 9 characters)</td>
</tr>
<tr>
<td>Unit:</td>
<td>e.g. mg/l (max. 7 characters)</td>
</tr>
<tr>
<td>Blank required:</td>
<td>0 or 1</td>
</tr>
<tr>
<td>Standard adjustment possible:</td>
<td>0 or 1</td>
</tr>
<tr>
<td>Standard adjustment required:</td>
<td>0 or 1</td>
</tr>
</tbody>
</table>
4.11.2 Administrating user-defined programs with a terminal program

Generally, a terminal program serves to establish a connection to a device on a data interface and to communicate with the device via a console on the display. Thus, it is also possible to send command lines.

Terminal programs are available for different operating systems by different manufacturers. Windows (version 95 to XP) contains the "HyperTerminal" terminal program. It is in the program menu under Accessories.

For more detailed information please refer to the user information of the terminal program.

On the CD-ROM there is a configuration file for the HyperTerminal program. By double clicking the configuration file (*.ht) you open the HyperTerminal program with the pre-settings required for data exchange with the meter.

The pHotoFlex® STD can administrate the database of user-defined programs via command lines.

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>With the aid of the AK 540/B interface cable, connect the pHotoFlex® STD to the serial interface (COM port) of the PC (see section 8.1.2).</td>
</tr>
<tr>
<td>2</td>
<td>Make sure the pHotoFlex® STD is switched on.</td>
</tr>
<tr>
<td>3</td>
<td>Start the terminal program on the PC.</td>
</tr>
<tr>
<td>4</td>
<td>Configure the connection settings for the COM interface as necessary.</td>
</tr>
</tbody>
</table>

**Storing user-defined programs**

Enter a command line according to the following scheme in the terminal program:

U.500#14,Program No,Model,Cell [mm],Wave length [nm],MRB,MRE,E0,Slope,Resolution,Citation form,Unit,Blank required,Standard adjustment possible,Standard adjustment required

Example:

U.500#14,900,test,16,436,0.0,2.0,0.0,1.0,0.01,test,mg/1,0,1,0
The individual data sections of the command line are separated by commas. The dot "." has to be used as a decimal separator within a data section.

5  Enter the command line.
6  Finish the command line with Enter. The data is transmitted to the pHotoFlex® STD.

If there is already a program stored under the selected number, the programming is canceled. If you wish to store the program under the selected number, you have to erase the program stored under the number first.

After a successful transmission, the terminal program writes "!>". After a failed transmission, the terminal program writes "!>".

**Erasing user-defined programs**

To erase user-defined programs, enter a command line according to the following scheme in the terminal program:

<table>
<thead>
<tr>
<th>Command line</th>
<th>Erase all user-defined programs</th>
<th>Erase one user-defined program</th>
</tr>
</thead>
<tbody>
<tr>
<td>U.520</td>
<td></td>
<td>U.521#1, Program No</td>
</tr>
<tr>
<td>Example</td>
<td>U.520</td>
<td>U.521#1, 900</td>
</tr>
</tbody>
</table>

7  Enter the command line.
8  Finish the command line with Enter. The data is transmitted to the pHotoFlex® STD. The requested data is displayed on the terminal as the result.

After a successful transmission, the requested data is displayed on the terminal. After a failed transmission, the terminal program writes "!>".

**Reading out user-defined programs**

To read out user-defined programs, enter a command line according to the following scheme in the terminal program:

<table>
<thead>
<tr>
<th>Command line</th>
<th>Read out all user-defined programs</th>
<th>Read out one user-defined program</th>
</tr>
</thead>
<tbody>
<tr>
<td>U.510</td>
<td></td>
<td>U.511#1, Program No</td>
</tr>
<tr>
<td>Example</td>
<td>U.510</td>
<td>U.511#1, 900</td>
</tr>
</tbody>
</table>

9  Enter the command line.
10 Finish the command line with Enter.
   The data is transmitted to the pHotoFlex® STD.
   The requested data is displayed on the terminal as the result.

After a successful transmission, the terminal program writes "!>".
After a failed transmission, the terminal program writes "!>".
5 Maintenance, cleaning, disposal

5.1 Maintenance

The meter is almost maintenance-free. The only maintenance task is replacing the batteries or rechargeable battery.

5.1.1 Inserting/exchanging the batteries

**NOTE**
Make sure that the poles of the batteries are positioned correctly. The ± signs on the batteries must correspond to the ± signs in the battery compartment.

1. Open the battery compartment:
   - Unscrew the two screws (1) on the underside of the meter,
   - Remove the lid of the battery compartment (2).

2. If necessary, take four old batteries out of the battery compartment.

3. Insert four batteries (3) in the battery compartment.

4. Close the battery compartment and fix it with the screws.
Dispose of used batteries according to the local regulations of your country.

End users within the European Union are obligated to return used batteries (even ecologically compatible ones) to a collection point set up for recycling purposes.

Batteries are marked with the crossed-out waste container symbol. Therefore, they may not be disposed with the domestic waste.

### 5.1.2 Retrofitting the rechargeable battery

**NOTE**

Use original YSI rechargeable battery only.

Together with the power pack the rechargeable battery is available as an accessory (see section 8.1).

---

1. Open the battery compartment:
   - Unscrew the two screws (1) on the underside of the meter,
   - Remove the lid of the battery compartment (2).

2. If necessary, take four old batteries out of the battery compartment.
Dispose of used batteries according to the local regulations of your country.

End users within the European Union are obligated to return used batteries (even ecologically compatible ones) to a collection point set up for recycling purposes.

Batteries are marked with the crossed-out waste container symbol. Therefore, they may not be disposed with the domestic waste.

5.2 Cleaning

Occasionally wipe the outside of the measuring instrument with a damp, lint-free cloth. Disinfect the housing with isopropanol as required.

NOTE
The housing parts are made of plastic (polyurethane, ABS and PMMA) and are only conditionally resistant against organic solvents. Thus, avoid contact with acetone and similar detergents that contain solvents. Remove any splashes immediately.

5.2.1 Cleaning the cell shaft

If liquid is in the cell shaft (e.g. due to a spilled cell), clean the cell shaft as follows:

CAUTION
Cells can contain poisonous or corrosive substances. If the content is released follow the danger warnings on the cell. If necessary, take corresponding protective measures (protective goggles, protective gloves etc.).

1 Switch the pHotoFlex® STD off and pull out the power plug.
2 Rinse the cell shaft with distilled water.
5.2.2 Cleaning the cells

Cells have to be clean, dry, and free of fingerprints. Therefore, clean them regularly:

1. Clean the cells inside and out with hydrochloric acid or laboratory soap.
2. Rinse out several times with distilled water.
3. Let them dry in the air.
4. Only hold the cells by the top or by the light protection cap so that the optical path is not impaired.
5. Before measuring, clean the cell with the enclosed cleaning cloth.

5.3 Packing

This meter is sent out in a protective transport packing.

We recommend: Keep the packing material. The original packing protects the meter against damage during transport.

5.4 Disposal

Batteries

Dispose of used batteries according to the local regulations of your country (see section 5.1.1).

Meter

At the end of its operational lifetime, the meter must be returned to the disposal or return system statutory in your country. If you have any questions, please contact your supplier.
### 6 What to do if...

#### 6.1 General errors

<table>
<thead>
<tr>
<th>Display, LoBat</th>
<th>Cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>– The batteries or rechargeable battery are largely depleted</td>
<td>– Insert new batteries</td>
</tr>
<tr>
<td></td>
<td></td>
<td>– Charge the rechargeable battery (see section 3.2)</td>
</tr>
</tbody>
</table>

Glossary

Analysis instructions
The exact proceeding to carry out the detection procedure is described in the analysis instructions.

Blank value (reagent blank value)
The evaluation of the photometric measurement always refers to the comparison value of a sample without the substance to be determined (reagent blank value). Thus the influence of the basic absorbance of the reagents on photometric measurement is compensated for.

Cell
Vessel to take a liquid sample to the photometric measurement. The cell material (mostly glass) must have certain optical features to be suitable for photometry.
### Citation forms
Different forms of representing a measured concentration value that can be derived from each other.  
The method to determine phosphate, e.g. delivers a measured value for phosphorous P. This measured value can be alternatively quoted in the citation forms, PO₄, PO₄-P or P₂O₅.

### Detection procedure
The detection procedure designates the general principle of how a sample is brought into a form suitable for measurement.  
Different methods can be based on the same detection procedure.

<table>
<thead>
<tr>
<th>LED</th>
<th>Light Emitting Diode</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>LEDs are used as the light source in the pHotoFlex® STD.</td>
</tr>
</tbody>
</table>

### Measured value
The measured value is the special value of a measured parameter to be determined. It is given as a combination of the numerical value and unit (e.g. 3 m; 0.5 s; 5.2 A; 373.15 K).

### Method
A method comprises a chemical detection procedure and special method data (calibration line) that is required to evaluate the measurement results.  
How to carry out the method up to the photometric measurement is described in the analysis instructions.  
The pHotoFlex® STD contains a database with methods (programs). Furthermore, user-defined methods can be entered in the database as well.

### Program
In the pHotoFlex® STD, methods with the relevant method data are stored as programs.  
Programs are called up via the assigned program number.

### Reset
Restoring the original condition of all settings of a measuring system.

### Resolution
Smallest difference between two measured values that can be displayed by a meter.

### Test set (test)
A test set contains all reagents that are required for the photometric determination of the sample according to the analysis instructions.

### Zero adjustment
Adjusting a photometer with a water-filled cell.  
The zero adjustment applies to measuring all measured parameters (concentration, absorbance, transmission) of a photometer.

11 Firmware update

General information
You can update the firmware of the pHotoFlex® STD to the latest version with the aid of a Personal Computer. You can find available firmware update files for your meter on the Internet.

The update program contains:
- the newest firmware (meter software)
- new or changed method data and programs.

Connecting the meter to the PC
The following is required for connection to a PC:
- a free serial interface (COM or USB port) on your PC
- cable or LabStation with cable for connection to PC
  - for direct connection of the meter to the PC:
    the AK 540/B interface cable (accessory) or
  - for connection with the LabStation:
    an operable LabStation with null modem cable (accessory, see LabStation operating manual)
- for connection to a USB interface on the PC:
  a USB adapter (accessory).

Program installation
Install the firmware update program on your PC.

For Microsoft Windows 7, administrator rights are required.

Program start
Start the program from the Windows start menu. Via the language menu you can change the adjusted language.

For Microsoft Windows 7, administrator rights are required.

Firmware update
Proceed as follows:

1. Connect the pHotoFlex® STD to an interface of the PC.
2. Make sure the pHotoFlex® STD is switched on.
3. To start the updating process, click the OK button.
4. Then follow the instructions of the program.
The programming process takes approx. 5 minutes.
A terminatory message is displayed after a successful programming process. The firmware update is now completed.
5 Disconnect the meter from the PC.
The meter is ready for operation.

After switching the meter off and on you can check whether the meter has taken over the new software version on the start display.
12 Contact Information

12.1 Ordering & Technical Support

Telephone:  (800) 897-4151
            (937) 767-7241
            Monday through Friday, 8:00 AM to 5:00 PM ET

Fax:        (937) 767-1058

Email:      environmental@ysi.com

Mail:       YSI Incorporated
            1725 Brannum Lane
            Yellow Springs, OH 45387
            USA

Internet:   www.ysi.com

When placing an order please have the following information available:

YSI account number (if available)  Name and Phone Number
Model number or brief description  Billing and shipping address
Quantity                             Purchase Order or Credit Card

12.2 Service Information

YSI has authorized service centers throughout the United States and Internationally. For the nearest service center information, please visit www.ysi.com and click ‘Support’ or contact YSI Technical Support directly at 800-897-4151.

When returning a product for service, include the Product Return form with cleaning certification. The form must be completely filled out for an YSI Service Center to accept the instrument for service. The Product Return form may be downloaded at www.ysi.com and clicking on the ‘Support’ tab.
1) The tissue in plants that brings water upward from the roots;
2) a leading global water technology company.

We’re 12,500 people unified in a common purpose: creating innovative solutions to meet our world’s water needs. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. We move, treat, analyze, and return water to the environment, and we help people use water efficiently, in their homes, buildings, factories and farms. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise, backed by a legacy of innovation.
